

von Gerkan, Marg
and Partners
Architects
Our Profile

"Finding appropriate and acceptable solutions to the design of our environment demands an openness for dialogue and adjusting one's approach to changing conditions. The decision as to what and how to build is made by society, with its complex political and economic mechanisms. We as architects have not only the obligation but also the responsibility to partake in this dialogue and to do so with inner conviction."

Prof. Dr.-Ing. h.c. Volkwin Marg

The Practice

We—von Gerkan, Marg and Partners Architects (gmp)—are an architectural practice that was founded in Hamburg and has branches worldwide. With our generalist approach and more than 50 years of experience, we complete projects in dialogue with our clients and participating planning disciplines, at all scales and cultural contexts, covering all design phases and working on all continents. The range of our projects extends from family residences to high-rise buildings, from stadiums to concert halls, from office buildings to bridges, and from door hardware to urban planning. With holistic sustainability in mind, we aim create new and refurbished architecture, that is long-lasting and goes beyond temporary fashions, taking into account the global challenges and issues of urbanization, digitalization, and mobility. In our designs we are committed to climate-aware construction in accordance with certified standards and to building in existing contexts.

Our Philosophy

Our ideal is to design things that are simple enough to maintain programmatic relevance and preclude obsolescence. For us, a building is "simply" good when it optimally fulfills its functional requirements, is constructed in a way that makes sense, is built of appropriate materials, and credibly responds to the conditions of the place. Therefore we always try to formulate a few core questions that capture the essence of the design task. We see ourselves as partners who devise responses in an environmental context. We believe that an architect's task lies foremost in turning ideas into reality: to do what is sensibly possible without losing the ability to consider the impossible. For us, architecture is not a question of style but a question of matching the form of buildings to the spaces we live in. It is our unequivocal mission—in everything we design and build—to act in accordance with shared principles in terms of content and concept. We are committed to an approach we call "designing in dialogue." The approach could also be called dialectic in the sense of an imaginary interactive dialogue between the intellectual position of the architect and the parameters defined by the specific conditions. In concrete terms, our architectural approach can be summarized by four guiding principles of designing in dialogue:

Simplicity

Unity in diversity

Uniqueness

Structural order

Germany, 1974

Berlin Tegel Airport

Meinhard von Gerkan and Volkwin Marg founded their partnership in 1965. From the very beginning they adopted a generalist position involving a holistic professional approach that is open to building at any scale, for every typological need, and under a wide range of cultural and contextual conditions. During their first year, the newly qualified architects won eight architectural competitions, including the international competition for Berlin Tegel Airport, which they won together with Klaus Nickels—and for which they were subsequently entrusted with comprehensive planning and design tasks. Later this was followed by other airports, amongst them Stuttgart and Hamburg.

Since 1972 the architectural practice has been operating under the name gmp · von Gerkan, Marg and Partners Architects. The European Patent Office in Munich, completed in 1979, is an example of the office buildings that remain a focus of gmp's work today. Similarly, the Sports Forum of Kiel University marked the beginning of a series of magnificent sports buildings of the practice. The early projects are proof of the sustainability of gmp's buildings; fourteen of them have already been listed as historic monuments, including the Hanse Viertel shopping arcade in Hamburg.

Germany, 2006

Berlin Central Station

Following German unification, von Gerkan, Marg and Partners designed numerous projects in Berlin, primarily public buildings that include the largest interchange train station in Europe, opened in 2006, as well as Spandau Railway Station, the Tempodrom events venue, and Jakob-Kaiser-Haus for the German Bundestag. In 1996, the New Leipzig Trade Fair was one of the largest projects to open as part of the rebuilding of eastern Germany. For Expo 2000 in Hanover, gmp designed the Christus Pavilion, which, upon conclusion of the World Expo, was moved to its final position at Volkenroda Monastery. International projects followed in Turkey, Latvia, and Italy.

Shanghai, China, 2002

Lingang New City

In 1998 gmp won the competition for the German School in Beijing. The project was the trigger for intense building activities in China that continue to this day. This was followed in rapid sequence by the Nanning International Convention and Exhibition Center, the renovation of the National Museum of China, as well as other cultural, sports, and transport buildings. Branches were established in Beijing, Shanghai, and Shenzhen, as well as in Hanoi. From 2002, work on the master plan started for Lingang New City (now Nanhui New City) to the southeast of Shanghai. The Dalian Twin Towers marked the beginning of a series of high-rise projects in China, including several large ensemble developments and the Soho Bund project at Shanghai's famous promenade along the Huangpu River. In Vietnam, too, a number of prestigious public buildings were created—the National Convention Center, the Hanoi Museum, and the parliament building of the Vietnamese National Assembly.

Brasília, Brazil, 2013

Estádio Nacional

gmp started their worldwide involvement with sports and stadium buildings for large international events at the beginning of the millennium and soon became recognized experts in this field. The modernization of the Berlin Olympic Stadium, including the addition of a roof, was followed by renovations and newly built stadiums for the 2010 FIFA World Cup in South Africa and the 2014 FIFA World Cup in Brazil, as well as for the UEFA Euro 2012. In China, the practice created large sports parks such as the Shanghai Oriental Sports Center and the buildings for the 2011 Universiade in Shenzhen. gmp has also built stadiums in Romania, Azerbaijan, India, Ukraine, and Russia.

Kunsthalle Mannheim

In 2007, Meinhard von Gerkan, Volkwin Marg, and their partners founded the Academy for Architectural Culture (aac) in Hamburg. With their involvement in the design of Hamburg's HafenCity and Berlin's Europacity, gmp has played a role in two of the largest urban development projects in Germany. Wide recognition has been received for the conversion of Hans-Sachs-Haus in Gelsenkirchen, the new extension to Kunsthalle Mannheim, and the refurbishment of the Kulturpalast in Dresden—projects that were developed on the basis of a very thorough study of the existing landmarked building stock and taking into account the urban design context.

Projects, Awards, and Certifications

Over the course of 50 years, gmp has won almost 600 first prizes in national and international architectural competitions, and more than 300 of its buildings and projects have received awards. To date, the practice has completed more than 550 projects in 23 countries.

Exhibitions

Exhibitions of gmp's work were and are present worldwide, at locations such as Oscar Niemeyer's Museu de Arte Contemporânea de Niterói in Brazil, the Neue Pinakothek der Moderne in Munich, and the National Museum of China in Beijing. With the contribution "Renaissance of Railway Stations" we presented the results of our work at the 6th Architecture Biennale. This was followed by numerous other exhibitions at various venues in Venice up to the present day.

Publications

The first volume documenting our work was published in 1978 and presented a collection of projects from the first thirteen years of our practice. Since then, as well as adding thirteen volumes in the mono-graph series, the spectrum of publications has broadened significantly:
Our *gmp Focus* series deals with outstanding individual projects, including Kulturpalast Dresden, Kunst-halle Mannheim, and the Chinese National Museum. In addition, there are monographs on different types of buildings, such as stadium architecture and upgrading historical buildings, and specific projects. Another line of publications deals with topics of architectural theory. Biographies presenting the life and work of the two founding partners, Meinhard von Gerkan and Volkwin Marg, round off the list.

gmp Foundation

The Hamburg-based gmp Foundation was established in 2007 by gmp · von Gerkan, Marg and Partners Architects for the professional development and training of students and graduates, as well as to encourage research in the fields of architecture, landscape architecture, and landscape conservation at home and abroad. This mission is accomplished primarily through the Foundation's funding of the Academy for Architectural Culture (aac) in Hamburg. In addition to providing teaching to highly gifted students and graduates in the field of architecture, the aac organizes a broad spectrum of public cultural and scientific activities in the form of lectures, podium discussions, symposia, et cetera, in order to promote and forge, in a direct and lively manner, closer links between architecture and the humanities as well as other cultural fields.

aac Academy for Architectural Culture

Architects occupy a special position in terms of social responsibility, because architecture is an art form that is applied in a social context and has social obligations. This understanding of architecture has been a key element of gmp's mission and work for over 50 years and has earned worldwide professional recognition for the practice. The aac teaches architecture in dialogue—a discourse between architecture's requirements and the architects themselves. It is a feedback process in which both sides respond to each other and influence each other. Teaching at the aac is based on designing in dialogue. This assumes that architects represent society, not themselves. It also ensures that architects do not become entrapped in highly specialized positions by enabling them to develop conceptual architectural designs within much wider terms of reference. Designing in dialogue makes it possible to handle projects lucidly, rationally, and appropriately from the initial design through to implementation; dialogue is never an end in itself, but completely oriented toward practical application. Architects working on the international stage also need intercultural competence. That is one reason why the aac is internationally oriented, seeing intercultural exchange—the process of bringing different cultures closer together—as part of the expansion of the participants' cultural horizon. That applies to the architectural side as much as it does to mentalities, traditions, and social, political, and religious attitudes. Working together with fellow students from all over the world gives aac students the opportunity to tackle these issues directly. Openness in this respect is as important as architectural talent.

www.aac-hamburg.de

Team

At gmp, nearly 600 people from more than 50 countries work together. With the help of numerous long-term employees whose expertise is the foundation of this office, we are committed to continuity as well as to the development of new staff; we appreciate the importance of motivated new staff members who design and develop projects in cooperation with their experienced colleagues. In addition to architects, we employ professionals from the fields of interior design, landscape architecture, BIM, and sustainable design. Every project is handled by the same team throughout its lifetime.

Founding Partners

Meinhard von Gerkan

Prof. Dr. h. c. mult. Dipl.-Ing. Architect BDA
(1935–2022)

In 1965, together with Volkwin Marg, Meinhard von Gerkan founded gmp · von Gerkan, Marg and Partners Architects. From 1974 to 2002, von Gerkan held the Chair of Architectural Design at the Technical University of Braunschweig. He was awarded an honorary doctorate by Philipps University in Marburg in 2002 and also by Chung Yuan Christian University in 2005. In 2007, the School of Design of East China Normal University in Shanghai awarded von Gerkan an honorary professorship and, from 2014 on, he was Advising Professor at Tongji University in Shanghai. Von Gerkan was a co-founder of the gmp Foundation and the Academy for Architectural Culture (aac), and he received numerous awards, including the Romanian State prize, the Grand Award of the German Association of Architects, the Federal Cross of Merit, 1st class, and the Liang Sicheng Prize of the Architectural Society of China. His best known projects include Berlin Tegel Airport, Berlin Central Station, Villa Guna in Jūrmala, Latvia, the Hanoi Museum, the Vietnamese National Assembly in Hanoi, the Grand Theater in Chongqing, the reconstruction and renovation of the National Museum of China in Beijing, and the master plan of Lingang New City near Shanghai.

Volkwin Marg

Prof. Dr.-Ing. h. c. Dipl.-Ing. Architect BDA

In 1965, together with Meinhard von Gerkan, Volkwin Marg founded gmp · von Gerkan, Marg and Partners Architects. From 1979 to 1984 Marg was President of the Association of German Architects (BDA), and from 1986 to 2003 he held the Chair of Urban Design and Material Studies at the Faculty for Architecture at Aachen Technical University. In 2012, Hamburg's HafenCity University awarded him an honorary doctorate. Marg is co-founder of the gmp Foundation and the Academy for Architectural Culture (aac) for the advancement of young architects, and he has received numerous awards, such as the Fritz Schumacher Prize, the medal of the Freie Akademie der Künste Hamburg, the Grand Award of the Association of German Architects, the Federal Cross of Merit, 1st class, and the Mayor Stolten medal of the Free and Hanseatic City of Hamburg. Marg's best known buildings include the European Patent Office in Munich, the New Leipzig Trade Fair, the refurbished and re-roofed Olympic Stadium in Berlin, and the stadiums in Cape Town, Durban, Port Elizabeth, Brasília, Manaus, and Belo Horizonte for the FIFA World Cups in South Africa and Brazil.

Executive partners

Stephan Schütz

Dipl.-Ing. Architect BDA

Stephan Schütz studied architecture at Braunschweig Technical University. After qualifying, he joined gmp · von Gerkan, Marg and Partners Architects in 1994, was appointed Partner in 2006 and became Executive Partner in 2021. Since 2009, Schütz has been regularly leading workshops at the Academy for Architectural Culture (aac), which he helped to initiate. His most important projects include the Civic Center in Weimar, the New Tempodrom in Berlin, the Christian Church in Beijing, the CYTS Plaza office building in Beijing, the Grand Theaters in Qingdao and Tianjin, the National Museum of China in Beijing, the Universiade Sports Center in Shenzhen, the conversion and refurbishment of Dresden's Kulturpalast as well as the Isarphilharmonie Gasteig HP8 in Munich

Wu Wei

Dipl. Arch. ETH SIA

After completing his studies in Chong-qing, China, Wu Wei worked as an architect in Lanzhou and Shanghai from 1992 to 1994. In 1995 he started further architectural studies at ETH Zurich, where he studied under Prof. Mario Campi and finished with a diploma in 2000. After working for the Zurich practice Skyline Architecture, Wu joined gmp · von Gerkan, Marg and Partners Architects in 2001, where he initially started as Head Representative of the offices in Beijing and Shanghai. In 2004 he became an Associate Partner, in 2009 Partner for China, full Partner in 2019, and then in 2021 Executive Partner.

Magdalena Weiß

Dipl.-Ing. Architect

Magdalena Weiß studied architecture in Stuttgart and Kassel and joined gmp · von Gerkan, Marg and Partners Architects in 1997. She has been managing gmp's branch in Shanghai since 2004, became Partner in 2021, and was appointed Executive Partner in 2023. Since 2023 Weiss has been a distinguished Professor at the Shanghai Academy of Fine Arts. In Germany she was involved in the design of the Swissôtel Berlin project at Kurfürstendamm. Over the years she has managed a number of prestigious projects in China, including the Shanghai Oriental Sports Center, the Suzhou Olympic Sports Center, the Changzhou Culture Plaza, the Caohejing Xinzhou Plaza and the Poly Greenland Plaza in Shanghai.

Offices

gmp has offices in eight cities worldwide—in Hamburg, Berlin, Aachen, Munich, Beijing, Shanghai, Shenzhen, and Hanoi. Our biggest offices are located in Hamburg, where the practice began, and in Berlin. On international projects, gmp Hamburg and gmp Berlin work closely with our branches in China and Vietnam. In addition to maintaining our branch offices, we operate temporary field offices when necessary for large-scale international projects, such as in the case of the stadium projects in Brazil and South Africa.
